01 PERGOLAS

ClearVue Pergola

BRANZ Appraised Translucent Roofing Panels

SunGuard ClearVue® Aluminium Pergola is a premium outdoor canopy solution that allows to expand your outdoor living area and shelter it from UV, heat and elements .

SunGuard ClearVue pergola is fully custom made. It is built using high quality aluminium components – all posts and beams are carefully selected for every project based on the size of the pergola and the preferences of the customer. It is powder coated to any colour of the Dulux range and works perfectly well with SunGuard outdoor blinds – Omni and Ziptrak screens. ClearVue panels block up to 99% of harmful UV rays & offer effective protection from sun, rain, wind and snow. Being adaptable & versatile to accommodate various roofing structures in width and length. We can install ClearVue panels on existing rafters, purlins or using the self-supporting span bar system. They are impact resistant, lightweight, and also covered by a generous 15 year warranty.

FABRICS

For our Omega roofs we use premium quality French fabrics – **Soltis Proof W96** and **Soltis Proof 502**. Both fabrics offer heat and weather protection, are dirt resistant and easy to maintain. Serge Ferrari fabrics have high dimensional stability due to their patented Precontraint® technology. **Soltis Proof 502** is a heavy-duty membrane with a satin finish, while **Soltis Proof W96** is a textured fabric available in a calm palette of neutral shades.

Both fabrics boast a high colourfastness, they are lightweight, durable and 100% recyclable.

02 EXTERIOR SCREENS

Ziptrak®

Premium track-guided drop down screen

Create a brand-new space in your home with our quality Ziptrak® exterior screen system. This outdoor blind offers improved protection from sun, dust, wind and rain for year-round outdoor entertaining.

For easiness of manual operation, the system is spring loaded. This ensures screens glide up or down easily and stop in any position you require. Automation packages with wind and sun sensors are available.

Each screen is 100% custom made, can be installed either between the posts/walls or using face fix channels.

Ziptrak® screen has no cords or wires that could obstruct the view, there are no locks on the floor. It is a child-safe product.

Enjoy a sense of daytime privacy while preserving your views with our mesh range or choose clear or tinted PVC for uninterrupted views and maximum rain protection.

02 EXTERIOR SCREENS

Omni (Café) Blinds

Crank-handle operated drop down screens

Designed and custom made in NZ, Omni screens, also known as Café blinds, combine practicality with style. Tailored to suit commercial and residential project needs, Omni come in three different modifications – **Lite**, **Guide** and **Channel**.

Omni Lite is a minimalistic straight drop screen with floor level stainless steel anchors. Can be crank handle operated or automated, rolls neatly away when not in use.

Omni Guide are fitted with stainless-steel guide wires installed at the sides of the screen. The wire guide allows safe operation when rolling away and minimises flapping in the wind when the blind is halfway open.

Omni Channel is the most popular system with aluminium channels that increase protection and provide a streamlined finish. Blind locks are integrated in the bottom bar, leaving the floor free of hooks or latches.

- Material: Clear PVC
- Width: 137 cm
- Roll Length: 30 M
- Thickness: 0.75mm
- Fire Retardant PVC available
- Finish: Clear and Tinted

Mesh & Opaque Fabric

Designed and manufactured in France, **Serge Ferrari Soltis** series is practical and durable. It provides excellent heat and UV protection, and is water, mould, dirt and fade resistant. These are soft perforated fabrics ideal for creating cosy shaded outdoor areas with glare-free outward visibility. The fabric's unique pattern and plain colour scheme will add a touch of a modern style to your home or business. We offer:

- **Soltis Proof W96** (0% openness, translucent, wind & waterproof)
- **Soltis Lounge 96** (4% openness)
- **Soltis Harmony 88** (8% openness)
- **Soltis Horizon 86** (14% openness)

If you prefer a more classic look of a basket weave pattern, Shadeview series is available in 25 colours and three different opacity categories – Extreme (3%), Urban (5%) and Classic (10%).

Thanks to its clever design, Shadeview mesh diffuses light, optimises views and blocks up to 97% of the sun's rays.

03 RETRACTABLE AWNINGS

Fabrics

Designed and manufactured in Spain, Docril is the flagship brand of 100% solution dyed acrylic canvas used for awnings, marine covers and sun umbrellas. It features unbeatable dimensional stability, high water repellence (Spray Test score of 100 – water runs over the surface of the canvas), strong resistance to abrasion, rot and mildew. Colour fastness is categorised as an impressive 7-8 on the Blue Scale.

Docril fabrics are treated to repel dirt and stains from oil-based products ensuring that splashes, dry stains and spills can be cleaned with a dry cloth, and dry stains can be brushed off easily. The official rating for the Oil Test varies between grade 3 and 6, the latter being the highest in the industry.

Colour fastness test ISO 105-B04

Docril offers an impressive selection of 132 premium quality fabrics – plain and striped – to suit any décor and provide excellent sun protection. It blocks up to 90% of harmful UV rays, offers visual and thermal comfort.

04 OUTDOOR AUTOMATION

somfy®

One of the world's leading manufacturers of smart home solutions with over 50 years of history of design and innovation. Based in France, Somfy boasts its European style and premium quality. Somfy products are covered by a 5-year warranty.

CONTROL UNITS

- Unique design
- Wireless wall-mounted RTS remotes (Smoove Range)
- "my" button provides easy access to a preferred position of the shade/awning
- Single and multi-channel remote controls

CONNEXOON WIFI HUB

Intuitive app control solution designed to simplify your life.

- Compatible with the entire range of Somfy RTS products
- Able to connect up to 4 smartphone devices
- Offers voice control with third-party voice assistants such as Amazon Alexa and Google Assistant

TUBULAR MOTORS

- Integrated radio control or WT technology (hard wired)
- Up, down and stop functions
- Can be pre-programmed with "my" favourite position
- Smart Home integration motors for building management systems (BMS) - WT motors

SENSORS

- The most reliable radio controlled wind sensors for awnings on the market
- Intelligent sensors that recall last information to adapt its behaviour based on the weather
- Intuitive programming
- Sun/rain/wind sensors available

04 OUTDOOR AUTOMATION

Reliable and affordable, Alpha offers intuitive motorisation solutions at a highly competitive price. Known for their wide range of remote controls and one of the best warranty policies on the market – 7 years.

TUBULAR MOTORS

High-quality motors designed for outdoor products with manual override option available for open-type awnings. When used with sun/wind sensors or motion sensors, Alpha motors detect a pulse from the sensor issued every 20 minutes. If an awning is out and does not receive a signal from the sensor for half an hour, it will close itself automatically as a protective measure in case the sensor has failed or the batteries are flat.

WIND SENSORS

Upon detecting high levels of wind, Alpha sensors will communicate with the motor via radio frequency and automatically retract paired motorized outdoor shade products. Wireless sun and wind sensors are also available. Compatible with retractable awnings, exterior screens and indoor shade products of our range.

CONTROL UNITS

Wall mounted switches or Pioneer/Navigator series remote controls available

- Channels: 1/4/8/16
- Frequency (MHz): 433.92

NEO WIFI HUB & APP

Allows to control motorised products individually, or by area, or the whole house at once from anywhere in the world with an internet connection. Scheduling feature available.

05 FIXED AWNINGS

Wedge Awning

Custom made in New Zealand, these fixed awnings are designed to deal with all weather conditions. A welded frame made out of high-quality extruded aluminium is attached to the building and posts are not generally required. The frame can be custom powder coated to any Dulux colour. All our fixed frame awnings are covered with durable European made Diamond series waterproof PVC. Choose an optional valance for a polished and refined look.

We offer a selection of frame shapes: classic wedge, Spanish hoop and vertical hoop. Our fixed frame awnings can also come with a flat front message panel for business signage, fabric digital printing is available.

Our fixed awnings are covered by **a 5-year warranty on fabric and framing.** (Ts & Cs apply)

Fabric

Diamond 700 Series is a durable Austrian made architectural fabric designed for outdoor applications. It provides effective protection against sun, wind and rain. Available in 34 colours, this high-quality fabric comes with a 5-year warranty.

Diamond Translucent Series blocks out the sun's heat and glare creating warm shade with soft natural light. Available in two colours- white and grey. Weldable PVDF coating ensures extra-long life and easy cleaning. Covered by a generous 7-year warranty.

06 SHADE SAILS / WAVE SHADES

Shade Sails

Whether providing a subtle architectural accent to a residential property or expanding over large commercial areas, our shade sails are always very aesthetically pleasing and can be easily integrated into any landscape. We use tensioned fabric membranes, custom-designed to your specifications – our sail designs feature various twisted and angled options to provide shade over areas of any size and shape. Shade sails work well as a single shade structure, or as a combination with multiple, interacting and overlapping designs. Our sails are custom-patterned using CAD software for precision and are manufactured with smart fittings to enable optimum installation. Quality marine grade stainless-steel hardware ensures strength and durability. Shade sails can be attached to steel poles or strong, structural parts of an existing structure or building. It is also possible to use a wire cable to extend your shade sail corner to a fixing point.

Fabric

We use a range of commercial grade shade fabrics that provide up to 99% UVR block, offering ultimate sun protection while allowing light and airflow through the fabric. Developed in Australia, **Shadetec 320®**, **Extrablock 330®** & **Monotec 370®** are manufactured from High Density Polyethylene (HDPE) monofilament and tape filament (yarn) that is lockstitch knitted together providing a very high strength fabric. All our fabrics are eco-friendly and are 100% recyclable. Waterproof fabric – **Serge Ferrari Soltis 502** – is available.

Shadetec 320 ®	Shade Factor 75% - 97% (depends on colour)	UVR Block 91% - 95%	Available in 14 colours	13-year warranty (Ts & Cs apply)	Stain/grime & mildew resistant Abrasion resistant yarn	Ideal for smaller residential shade sails - single colour filaments ensure consistent colour tone
Monotec 370 ®	Shade Factor 70.9% - 88.4% (depends on colour)	UVR Block 84.1% - 88.5%	Available in 15 colours	15-year warranty best in the industry! (Ts & Cs apply)	Stain/grime & mildew resistant	Ideal for larger sails & structures – extra wide fabric ensures seams in sails are kept to a minimum
Extrablock 330 ®	Shade Factor 81% - 97% (depends on colour)	UVR Block 96% - 98%	Available in 21 colours (Cream, Beige, Yellow & Red are not FR)	10-year warranty (Ts & Cs apply)	Rot/mould & mildew resistant	Fire retardancy rated FRAS1530.2 / FR AS1530.3 / Complies with CSFM

06 SHADE SAILS / WAVE SHADES

Wave Shades

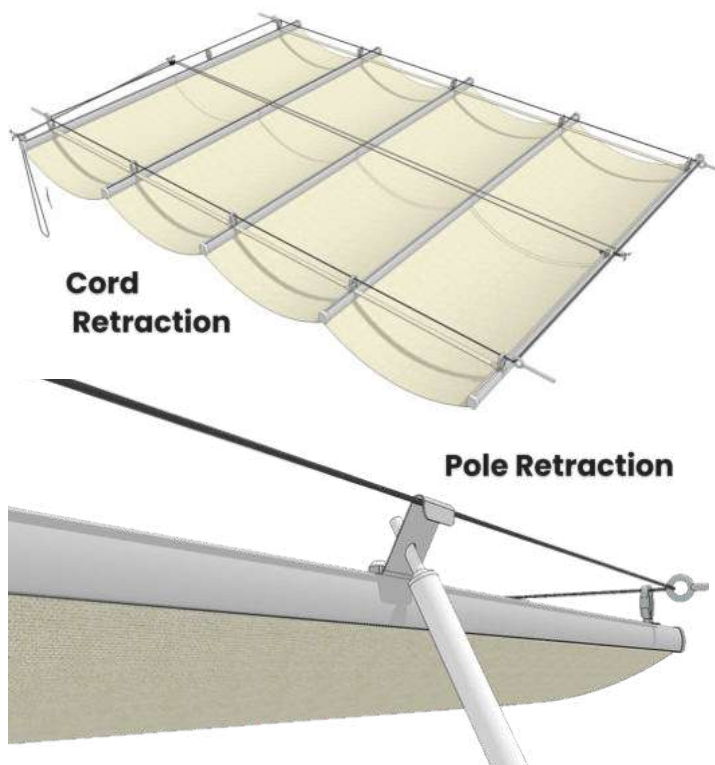

Stylish and practical, wave shades offer an attractive alternative to traditional shade sails. Fully customisable, designed and built to perform in tough weather conditions, wave shades are the perfect addition to any residential or commercial outdoor area. Through clever design, you can extend the billows in a matter of seconds to enjoy the shade or slide them back when you need more light. These stylish sails are available in a wide range of colours and can be fitted to a variety of structures – pergolas, timber beams, posts and houses. Covered by a **5-year warranty**. (Ts & Cs apply)

Operation

User friendly design makes wave shades a breeze to use – choose either an integrated cord or pole retraction system.

The cord retraction option operates on a stainless steel pulley and a polyester braid. It works like a blind, pulling one side of the cord loop to retract while pulling the other way extends it; this system allows to lock off the wave shade when it's halfway open.

Alternatively, pull stick operated shades are supplied with an aluminium pole that hooks to a stainless steel cleat on the front spar of the wave shade manually retracting and extending the sail; simply insert the spiked end of the pole through the clip at one end, unlatch it from the wire and slide the shade away.

06 SHADE SAILS / WAVE SHADES

Wave Shades

Every wave shade system is tailored to your project, ensuring an excellent fit for your outdoor area. Choose the width, length, colour, number of billows and how low they hang.

DROP

This is the amount the fabric that hangs down below the wire cable when the shade is retracted. The standard drop is 400 - 450mm, this varies depending on the spar spacing. If there is some restriction below your shade, we can reduce the drop by adding additional spars to achieve the minimum 280mm.

BILLOW

This is the amount of fabric that hangs down below the wire cable when the shade is extended.

Medium billow (180mm) is our standard option. If you prefer a more flat look, we recommend the shallow option, or deep billow for a more pronounced round shape.

COMPONENTS

We use only the very best components and fabrics to offer years of hassle-free use. Our fixtures and fittings are made from marine-grade stainless steel, which makes Wave Shades suitable for coastal applications. Standard colour of spars is silver pearl, custom Dulux powder coating is available.

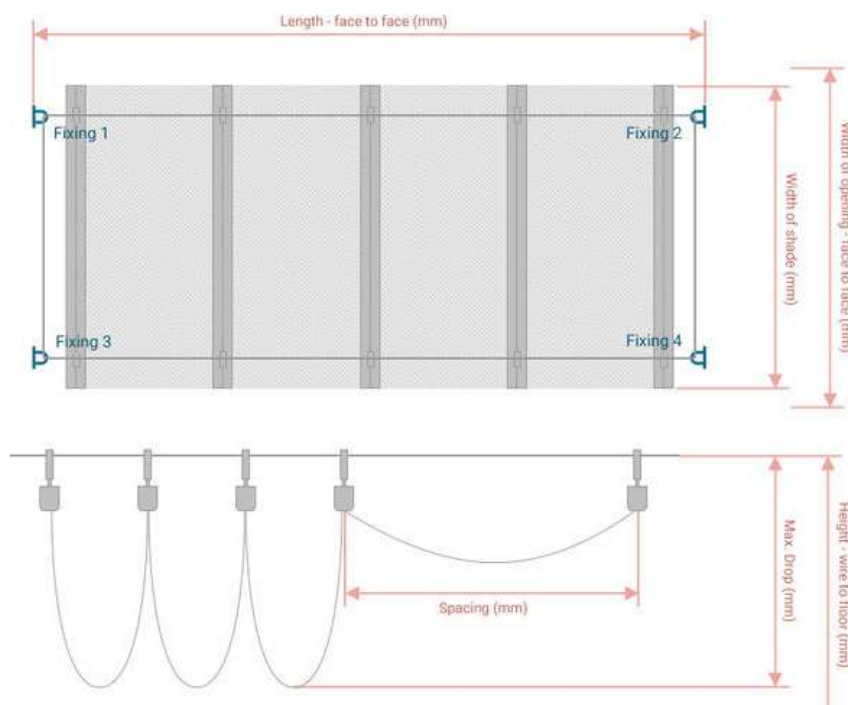

FABRIC

Wave shades are manufactured with commercial-grade mildew and mould resistant fabrics offering high UV and heat protection. They are fade resistant and easy to clean, **covered by a 5-year warranty.** (Ts & Cs apply)

ShadeView 300 is a high-performance fire-retardant mesh fabric. It has a 5% openness factor, offering exceptional UV and heat protection, as well as stunning looks. Available in 15 modern colours.

Enjoy natural light with **Serge Ferrari Soltis Lounge 96**. Its innovative micro -

perforated design offers protection from the sun's light and heat, while allowing the air to circulate. This helps achieve shade similar to the shade of a tree. Exclusive Précontraint® technology ensures Soltis fabrics exceed market standards of long-term stability, strength, coating thickness and flatness. If you're after a waterproof solution, stylish and low-maintenance **Serge Ferrari Soltis Proof W96** will protect you against UV and bad weather, while preserving the level of natural light transmitted.

07 ALUMINIUM SHUTTERS

Bermuda 2000

Versatile and stylish, Bermuda 2000 is designed to withstand all of NZ weather conditions. This heavy-duty aluminium construction is capable of withstanding high winds (up to 185km per hour). Bermuda 2000 Series uses only the highest quality aluminium and stainless-steel 316 components. With **a 10-year finished product warranty***, you can rest assured that your aluminium shutters are robust and built to last. *Ts & Cs apply

We custom design and fabricate every shutter job based on location and application. Our aluminium shutters will fit a variety of window sizes and shapes, and they come powder-coated in a range of colours to match the exterior of your home. This makes Bermuda perfect for almost any outdoor area, such as decks, patios, verandas, pergolas, alfrescos, balconies, and many others. Sleek and modern, these quality aluminium shutters can be also installed inside your property if required.

Bermuda 2000 requires very little maintenance, making it a cost-effective option over the long term. Aluminium shutters also add to better energy efficiency. This is achieved through creating a barrier from the elements as aluminium is known for deflecting heat away from windows.

08 PVC / TIMBER SHUTTERS

Add a touch of elegance to your home with our fantastic custom made interior shutters. With operating slats, shutters let you filter the sunlight and control the airflow in your home. Great for privacy. Our quality shutters are durable and easy to clean. Both **Riviera** and **Provence** series are backed by a generous **10-year finished product warranty**. (Ts & Cs apply)

Riviera (PVC) Extruded from premium class PVC, these indoor shutters are excellent for high temperature and high humidity environment, such as bathrooms and kitchens. Riviera AL panels and frames are reinforced with aluminium inserts, which makes them sturdy and reliable.

Provence (Timber) Manufactured from high-quality sustainably grown Tilia timber, these plantation shutters are light weight and extremely durable.

09 ROLLER BLINDS

Single roller blind

SunGuard roller blinds are custom made to your individual size requirements with your choice of fabric, bottom rail, control type and are available in a wide range of colours to enhance any home or commercial environment.

Components & Fabrics

We use high-quality Australian made Acmeda components with efficient chain retention system and improved contouring. Acmeda system secures chain within mechanism during operation and reduces chain drag and noise. Upgraded fin design ensures a more secure tube fitment.

New ergonomic **brackets** and clever sidewinder design contribute to the smooth and clean aesthetical appearance with only 14.5 mm light gaps on either side.

The diameter of roller blind tube must be capable of withstanding the weight and thickness of the fabric. To achieve the best results, we offer different **tube sizes** to accommodate different size blinds and fabrics - 35mm, 40mm, 45mm, 60mm, 100mm. We use a variety of **bottom rail** designs - oval, round, rectangular and premium D-30 rail with noise reducing brush bumper. Plastic and metal (nickel plated or stainless steel) **chains** in different colours and custom lengths are available.

We offer a wide range of **fabrics** from all the mainstream fabric manufacturers including **Shaw, Uniline, Acmeda, Shann, Vertex, Louvolite**. Up to 10 years warranty. Our fabrics provide effective UV protection, are lead free, tear and mildew resistant. PVC free fabrics are available.

Types

SINGLE ROLLER BLIND - a standard roller blind with one fabric roll, mounted inside or outside the frame.

DOUBLE (DUAL, DAY-NIGHT) ROLLER BLIND - two roller blinds on a special double bracket (traditional or slimline). Use the semi-transparent fabric during the daytime and change to the opaque one for more privacy at night. Each blind can be operated separately.

LINKED ROLLER BLIND - two or more blinds connected with a joiner to bring the gaps between the adjacent hanging fabrics to a minimum of 20mm versus 30mm if standard brackets are used. This allows to operate two blinds with one chain or motor.

AUTOMATED (MOTORISED) ROLLER BLIND - operated by a tubular motor in contrast to the traditional chain control.

Double (Day/Night) roller blind

09 ROLLER BLINDS

BLOCKOUT

Looking simple and clean, this opaque fabric has a super tight weave composition that blocks out all exterior light and provides total privacy. Some are made with thermal acrylic foam coating on the back. This offers better insulation properties. Ideal for bedrooms, kitchens and bathrooms.

THERMAL BLOCKOUT

Compared to the classic blackout, this fabric series is made from a heavier material that is softer to the touch. It's available in a variety of textures and patterns. Ideal for bedrooms and north-facing rooms.

ROOM DARKENING

Refers to fabrics that allow a small amount of exterior light to penetrate. Most solid coloured patterned blinds tend to fall into this category. Great for studies and offices.

LIGHT FILTERING

These are semi-opaque fabrics which allow transfused light to pass through the fabric. As it is not an open weave, this translucent fabric offers a high degree of privacy both day and night. Great for lounges and studies.

SUNSCREEN (Openness Factor - 2%, 3%, 5%, 10%)

Used where daytime views and natural light are prioritised. If privacy is required at night time - can be complemented by a blackout fabric on a double roller blind system. Popular choice for offices, studies and when views are prioritised.

SHEER

Loosely woven (or knitted) plain or patterned designs that are light weight and semi-transparent. Sheers have the same opacity and privacy properties as screen fabrics, but with a much softer fabric appearance. Great in a combination with a blackout fabric.

FRS Valance

Extra Options

Looking for a more advanced roller blind solution? We offer a comprehensive choice of head box styles, controls and side channel options with improved performance, functionality and aesthetics. Sleek and modern round or square head box profiles are available as **fascia** or **fully enclosed cassette** options. Our **Dim-Out modular system** features side channels and a cassette for optimum energy efficiency and increased blackout.

As homes get smarter, so should the shades. Here at SunGuard, we offer specialised shade motorisation and the latest in smart home technology.

We offer

hard wired motors – need to be connected to the mains by an electrician and do not require recharging;

rechargeable motors – come with a wire and a charger (similar to a cell phone charger) – those need to be recharged based on the frequency of use – approximately 12 months between charges. Wire free motors are easy to install with no electrician

required. Charge either with a wall charger when necessary or a solar panel for continual charging.

CONTROLS

Motorised roller blinds can be operated using a **wired or wirefree wall switch** or a hand held **remote control** with options of controlling up to 16 individual or grouped blinds at a time. With a

Wi-Fi hub you can operate your roller blinds through a phone app or integrate them into your smart home systems, such as Alexa, Google Home, Apple Home. Group shades by room or scene, establish custom schedules and set timers for convenient and efficient shade control.

Brands

ACMEDA

This US based company with divisions in Australia and Europe offers premium quality motors, controllers, sensors and smart home integration systems to create a variety of motorised shade solutions for a luxurious and effortless experience.

SOMFY

One of the world's leading manufacturers of smart shade solutions with over 50 years history of design and innovation. Based in France, Somfy boasts its European style and premium quality.

09 HONEYCOMB / PLEATED BLINDS

Honeycomb Blinds

These blinds offer an amazing boost to your window insulation by making your house or office warmer during winter and cooler in summer. To achieve the best possible look, all accessories used in our cellular blinds – the headrail, the bottom rail and the operating cord – are colour matched to the fabric. Honeycomb blinds are low maintenance, they are light and simple to operate.

Our standard range (38mm and 25mm) is covered by a **2-year warranty**, while Luxaflex® series have a **3-year warranty**.

(Ts & Cs apply)

Fabric

Honeycomb fabrics are engineered to trap the air inside the cells. Some of the blackout honeycomb blinds have a special aluminium foil lining inside, ensuring even better insulation properties. Cellular fabrics are available in the following **cell sizes**:

- 38 mm (single/double cell)
- 25 mm (single cell)
- 10mm (Luxaflex® Duette® range)
- 20mm (Luxaflex® Duette® range)

We offer a great choice of plain, textured, matte, glossy, linen textures and designer prints in light filtering and blackout collections.

Honeycomb blinds (Light Filtering 38mm)

Operation

Our cellular blinds come in the following modifications:

- standard cord – similar to venetian blinds
- looped cord (clutch operated) – similar to roller blinds, cord is of fixed length. Suitable for children's bedrooms
- cordless – you simply pull the blinds up/down using the bottom bar
- Top-Down, Bottom-Up
- Day-Night – blackout and light filtering fabrics combined in one blind
- wand operated – Skylight suitable honeycomb shades
- Smart Fit side wire guided system for Skylights (available in 25mm cell only)
- automated – a wide range of automation options, such as built-in battery powered or rechargeable headrail motors. Single and multi channel remote controls available.

Pleated Blinds

Beautiful, compact, functional – these blinds are a great solution for skylights, conservatory windows, arched, sloped, triangular and narrow frames. We work with the leading brands of pleated blinds – **Cosiflor® (Germany)** and **Luxaflex® (New Zealand)**. Choose from a variety of light filtering, blackout or sheer pleated fabrics, or try the modern metallised Verosol range from Luxaflex®. Pleated blinds can be hand, cord and pole operated. Top down, bottom up, day & night options available. Skylight and standard bottom-up blinds can be **motorised with Somfy** automation packages (Luxaflex Powerview range).

Pleated blind (Light Filtering)

11 VERTICAL BLINDS

Ideal for large windows and doors, such as ranch sliders, bi-folds, and also areas where you have minimal clearance. Great for commercial applications. Elegant and versatile, vertical blinds provide effective light and heat control.

To accommodate all style and design requirements, fabrics are available in **89mm**, **100mm** and **127mm widths**.

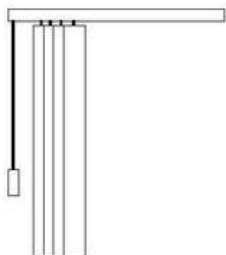

- Slim 28mm headrail that fits into smaller window frames
- Polycarbonate carriers for strength and security
- Wand control, safe for children and easy to operate, or standard chain and cord control
- Stainless steel chain control available
- Automatic self-aligning mechanism for even distribution of blades
- Better light control and more economical than curtains
- Option of a centre split or side stacking
- Grey, Satin Black, White, White Birch track colours available
- Traditional or chainless bottom weights - welded or sewn in
- Custom designed sloping blinds to fit non-standard windows
- Can be automated with Somfy automation package (Luxaflex® EOS® Helix series only)
- Covered by a **5-year warranty** (standard range) or a **3-year warranty** (Luxaflex® range) (Ts & Cs apply)

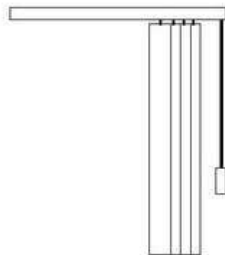

Fabric

We offer an extensive selection of quality blackout and light filtering fabrics. The PVC free acrylic coating has anti-fade, easy clean and antifungal properties. Greenguard Gold Certification ensures that our vertical fabric have a low level of chemical emissions which significantly improves the quality of the air.

10 VENETIAN BLINDS

Aluminium

25mm and 50mm

Our custom-made aluminium venetian blinds offer a sleek solution for those who wish to easily control light, visibility and privacy. With a 180 degree tilt, the slimline slats fit tightly when closed to create a blackout blind making them ideal for conference rooms and offices. Available in an extensive range of colours to suit any décor, our aluminium venetians are also extremely practical – easy-to-clean, heat- and moisture-resistant. Can be fitted inside or outside the window frame with left or right control options. Spring-loaded hold down devices are available.

Venetian blinds are perfect for privacy and controlling the angle of the sunlight entering the room. We offer a range of Venetian blinds made out of timber, PVC or aluminium. Our blinds come in 25mm, 50mm and 60mm slats in a variety of colours. All our venetian blinds are covered by a **5-year warranty**. (Ts & Cs apply)

Marupa Timber

50mm and 60mm in white only

Manufactured in New Zealand from premium Marupa (Simarouba amara) timber, these venetian blinds are extremely durable and lightweight, suitable for small and large window openings alike. Offering warmth and charm, Marupa is sourced from sustainable plantations which focus on quality. Each Marupa slat is covered with the latest UV protective coatings to ensure lasting protection and years of hassle-free blinds. All our timber blinds come with colour coordinated Fascia (75mm), cords and tapes. 50mm Marupa slats are available in five beautiful colours – White, Alabaster, Light Oak, Dark Oak and Black. Hold down brackets are available. These blinds can be made as small as 250mm wide.

Woodefex PVC

50mm

Affordable and practical, Woodefex venetian blinds are an attractive alternative to traditional timber venetians. Made in New Zealand from quality UV treated polyresin, these blinds offer a high resistance to heat and humidity and are ideal for the environments where this is required, like kitchens, bathrooms and laundries. This innovative material won't bend or warp. Our venetian blinds are easy to operate, perfect for controlling the amount of sunlight. These blinds can be made as small as 250mm wide. Available in three warm neutral colours – white, off-white and canvas, the Woodefex PVC venetian will provide your windows with a classic clean look.
